A cow is dull, sluggish, separate from the herd, chewing the cud languidly, or there may be frequent lying down and rising, uneasy movements of the hind feet or of the tail, and slightly accelerated pulse and breathing, and dry muzzle. The important thing is not to confound it with digestive or urinary disorder, but in a pregnant cow to examine at once for any increase of mucus in the vagina, or for blood or liquid there or on the root of the tail; for any enlargement, firmness, or tenderness of the udder; or in dry cows examine for milk; and above all for any slight straining suggestive of labor pains. In many cases the membranes are discharged with the fetus; in others, in advanced pregnancy, they fail to come away, and remain hanging...
