Its team of specialist authors provides a concrete, usable guide to this combination, ranging from the fundamentals of service-orientation to the more rarified air of .NET services in the cloud and beyond. If you're creating service-oriented software on the Microsoft platform--that is, if you're a serious .NET developer--mastering these ideas is a must." --From the Foreword by David Chappell, Chappell & Associates "Microsoft's diverse product line has long supported the service-oriented enterprise, but putting it all together into a cohesive whole can be daunting. From more established products, like Windows Communication Foundation, Windows Workflow Foundation, Microsoft Office SharePoint Server, and BizTalk Server, to newer offerings like Windows Azure and AppFabric, the experts assembled here expose the sweet spots for each technology, talk through the high-level trade-offs, and offer a roadmap to a unified Microsoft SOA story." --Kevin P. Davis, Ph.D., 871 pp. Englisch.
