

A Practical Treatise on the Strength and Stiffness of Timber Intended as a Guide for Engineers, Architects, Carpenters . To Which Is Added an AB

Filesize: 6.79 MB

Reviews

It in a of the best publication. It really is rally intriguing throug reading through period of time. You will not feel monotony at anytime of your own time (that's what catalogs are for relating to in the event you request me).

(Dr. Pat Hegmann)

A PRACTICAL TREATISE ON THE STRENGTH AND STIFFNESS OF TIMBER INTENDED AS A GUIDE FOR ENGINEERS, ARCHITECTS, CARPENTERS . TO WHICH IS ADDED AN AB

To get **A Practical Treatise on the Strength and Stiffness of Timber Intended as a Guide for Engineers, Architects, Carpenters . To Which Is Added an AB** PDF, please refer to the hyperlink under and save the document or have access to other information which are relevant to **A PRACTICAL TREATISE ON THE STRENGTH AND STIFFNESS OF TIMBER INTENDED AS A GUIDE FOR ENGINEERS, ARCHITECTS, CARPENTERS . TO WHICH IS ADDED AN AB** book.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 26 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1833 edition. Excerpt: . . . pounds, at a point 16 feet from one support, and 4 feet from the other; and half the weight of a beam of these dimensions is 141 pounds; therefore 3464--141 3323 pounds, the same as the load proposed. Problem XX. In the equation $mnw = 3ld^3$ there are given the diameter d , the length of bearing l , and the load w ; to find m and n , the segments of the length separately. Divide both sides of the equation by the given load, and we get mn by the nature of the question. Hence, by the rule at Problem VII. , we obtain for the segments of the length, the following expressions, viz. where m is the greater and n the lesser segment; from which the following practical rule is derived. Rule 36. Multiply 125 times the length of bearing in feet, by the cube of the diameter in inches; divide the product by the given load, and subtract the quotient from the square of the length; then, to or from the length, add or subtract the square root of the remainder, and half the sum, or half the difference, will give the greater or lesser segment accordingly. Example 26. A cylindrical beam of oak 7 inches in diameter, and 20 feet in length, is found to sustain a load of 3323 pounds, including the effect produced by its own weight; at what point of the length is the load applied Here, by the...
